3000

Predicted Yield: 2.868563 tonnes per hectare

Get AI-driven crop suggestions and accurate yield forecasts for better planning.

# Disease Prediction and Organic Farming

Disease prediction helps farmers by providing a tool to proactively identify plant diseases early, allowing them to take timely action and prevent crop failure.

## Organic Farming Excellence

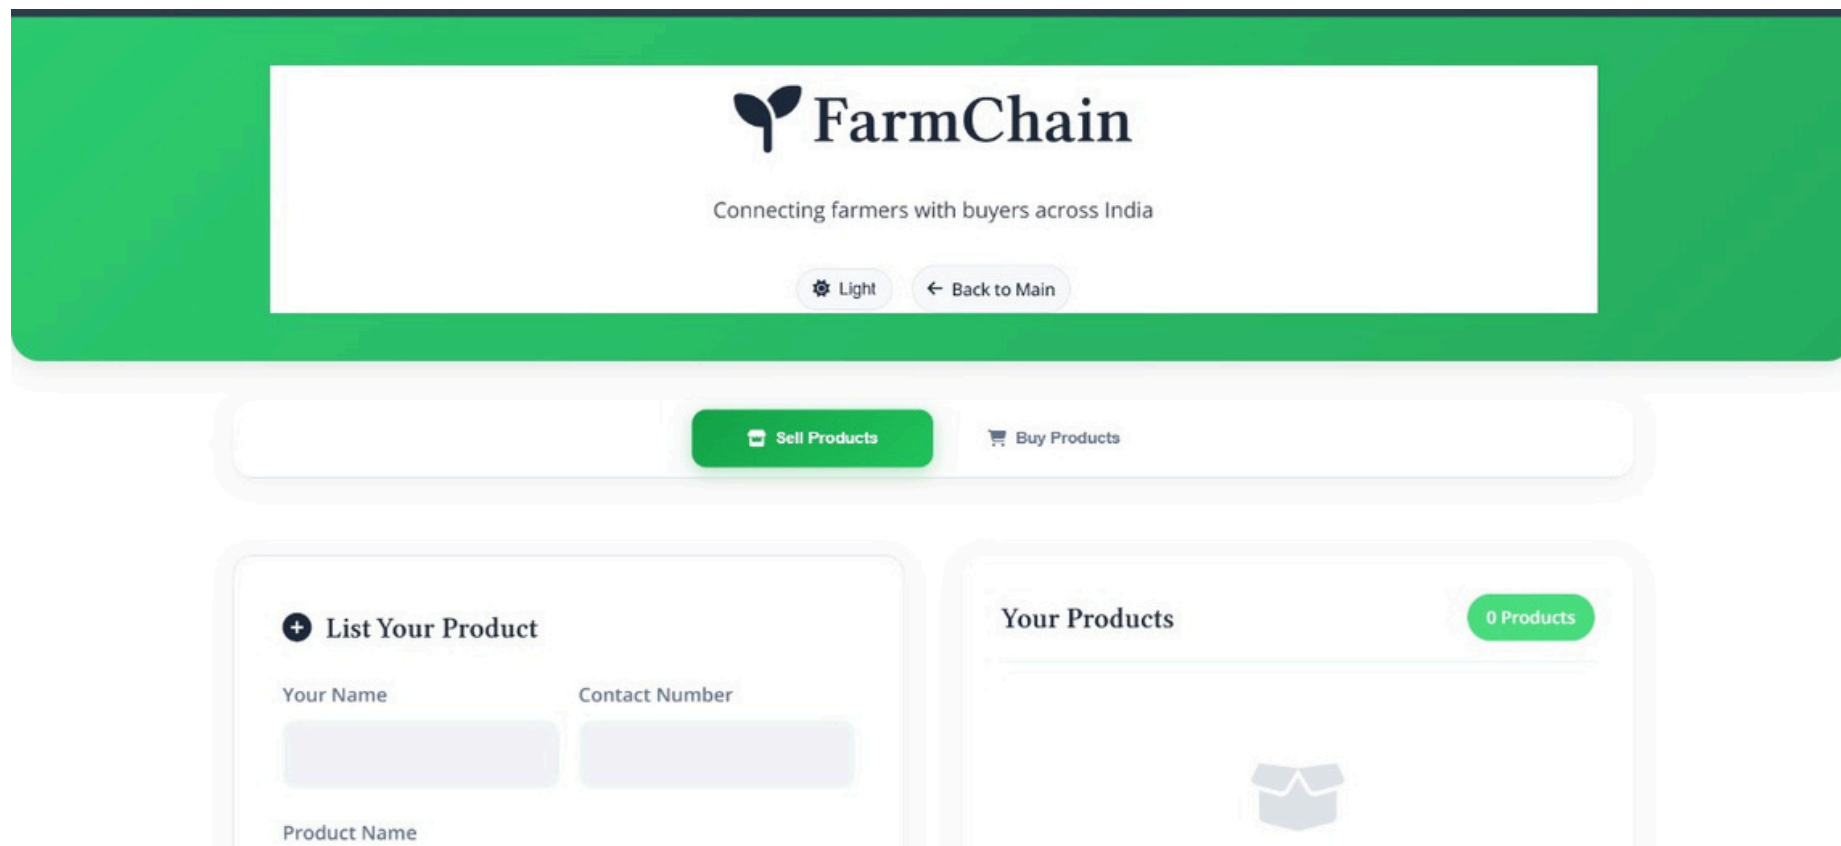

Discover sustainable agricultural practices that enhance soil health, preserve ecosystems, and produce premium quality crops through time-tested organic methods.

Organic farming serves as a guide for farmers, offering eco-friendly methods and techniques to sustainably cultivate crops while preserving soil health and biodiversity.

### Principles of Organic Farming

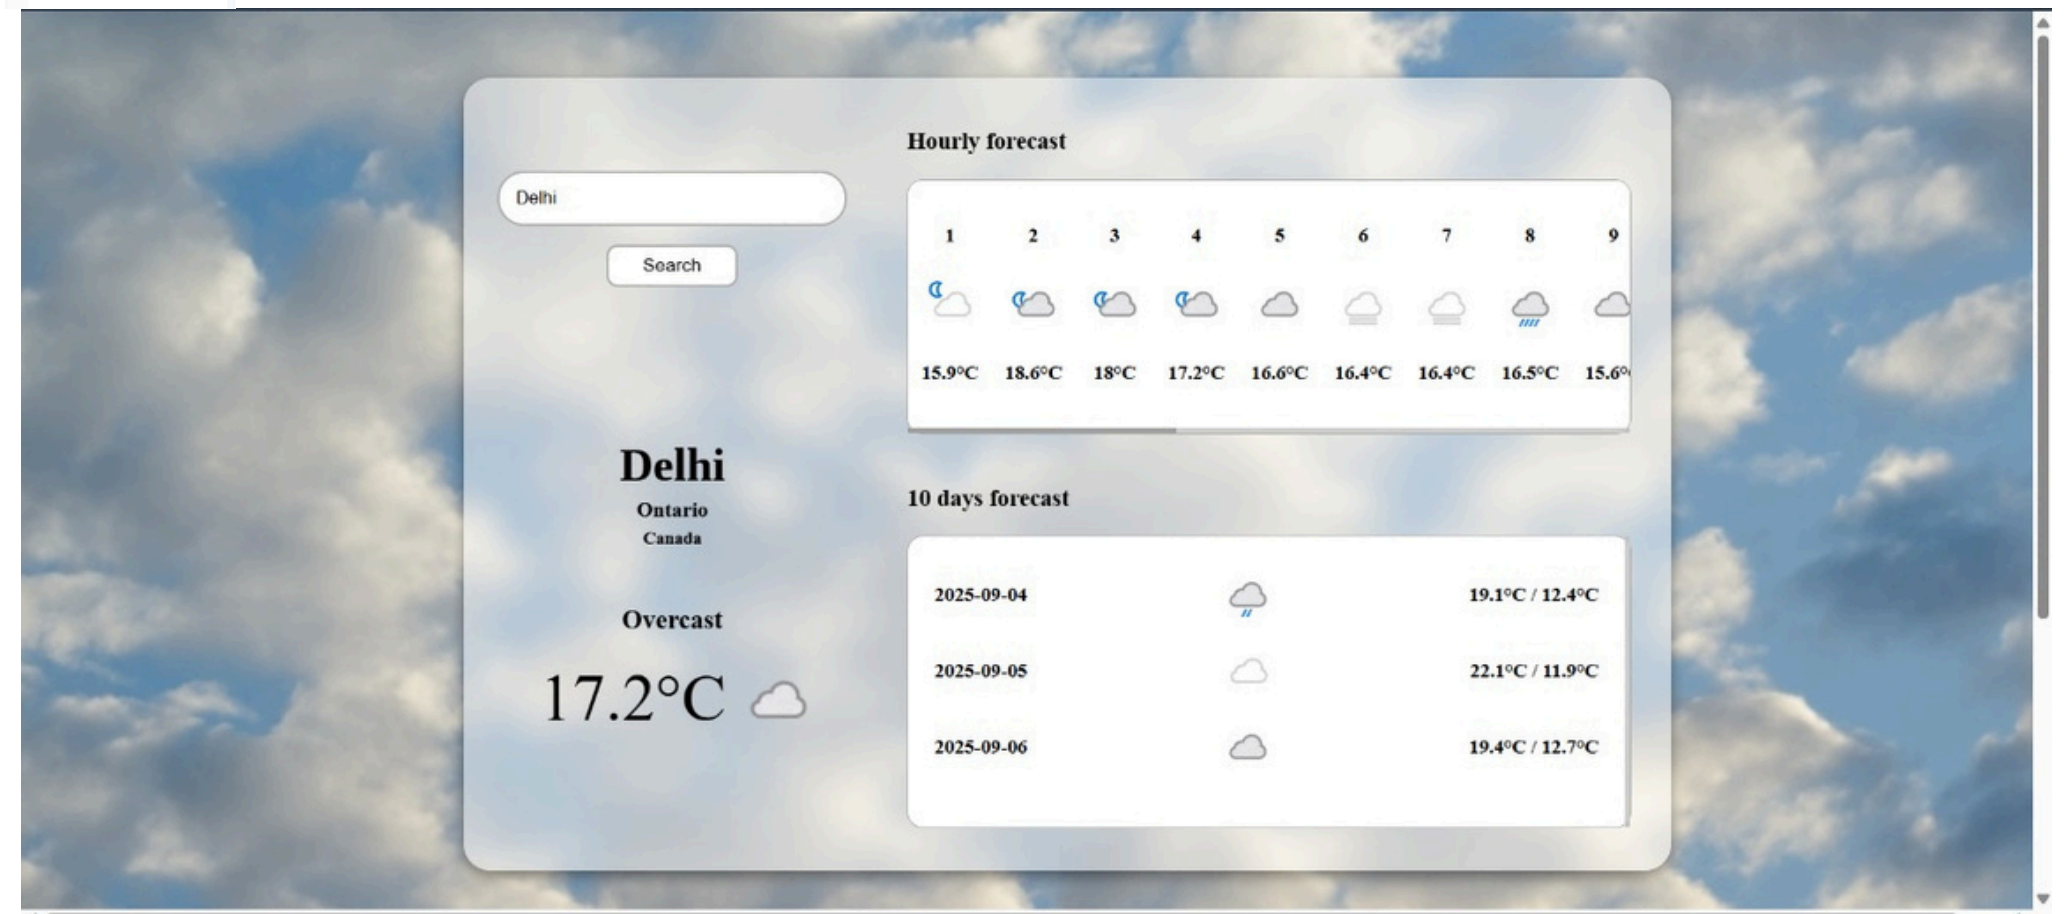

- ✓ **Ecology** : Work harmoniously with living systems and natural nutrient cycles
- ✓ **Health** : Sustain soil vitality, ecosystem balance, climate stability, and human well-being
- ✓ **Fairness** : Foster equitable relationships between people and the environment

# Weather Check and Farm Chain

FarmChain provides a direct-to-consumer platform connecting buyers and farmers, cutting out middlemen to ensure transparency and fairer prices.

Weather feature offers upcoming forecasts, enabling farmers to optimize their planting and crop planning.

# Shopkeeper Listings and AgriTech Chatbot

Chatbot is an AI assistant that gives farmers instant, on-demand answers to their questions about farming.

Shopkeeper Listings connects you with local suppliers for all essential farming supplies, from equipment to fertilizers.

# Plantation Guidance and Crop Planning

## Research and Development

Selecting the right crops for cultivation is a critical step in agricultural planning. It involves analyzing various factors such as climate, soil characteristics, and market demand to ensure optimal yield and profitability.

### 1. Assessing Climate Conditions

Climate plays a pivotal role in determining which crops can thrive in a particular region. Key climatic factors to consider include:

- **Temperature Ranges:** Understanding the average temperatures helps in selecting crops that can withstand local heat or cold.
- **Rainfall Patterns:** Analyzing annual precipitation and its distribution is essential, especially for rain-fed agriculture.
- **Growing Season Length:** The duration between the last and first frost dates influences the types of crops that can be grown.

For instance, in regions like Vidarbha, Maharashtra, farmers are shifting from traditional crops like cotton and soybean to maize due to its higher yield and better market prices, despite challenges like wildlife intrusion.

### 2. Analyzing Soil Characteristics

Soil health is fundamental to crop productivity. Key soil factors include:

- **Soil Type:** Sandy, loamy, or clay soils have different water retention and nutrient profiles.
- **pH Levels:** Certain crops require specific pH ranges for optimal nutrient uptake.

Plantation Guidance offers expert advice on planting techniques and a step-by-step farming guide, helping farmers ensure a successful harvest.

Crop Planner AI provides intelligent recommendations for crop selection and planting schedules to help farmers maximize their yield and profit.

# Crop Price Tracker and Schemes

The screenshot shows the 'Crop Price Tracker' web application. It features a green header with a 'Back to Main' button and a 'Light' mode toggle. The main content area is white and contains three dropdown menus for 'SELECT CROP', 'SELECT STATE', and 'SELECT MARKET'. Each dropdown has a placeholder text: '-- Choose your crop --', '-- First select a crop --', and '-- First select a state --' respectively. Below these is a 'TRACK PRICES' button. At the bottom, there is a section for 'Latest Market Prices' showing the date '04/09/2025', the price '₹6500 / quintal', and the location 'Vikasnagar, Uttrakhand'.

Crop Price Tracker provides real-time market prices to help farmers decide when and where to sell to get the best profit

Schemes is a centralized hub where farmers can discover and access all relevant government-provided schemes, subsidies, and financial aid.

The screenshot shows the 'Government Agricultural Schemes' web application. It features a green header with the title 'Government Agricultural Schemes' and the subtitle 'Your complete directory of central and state-backed agriculture schemes'. There is a 'Light Mode' toggle and a 'Back to Main' button. Below the header is a search bar with the placeholder text 'Search schemes, locations, or services...'. Under the search bar are three dropdown menus: 'All Categories', 'All States', and 'Name (A-Z)', along with a 'Reset All' button. At the bottom, there is a section titled 'Filter by Beneficiary Type' with three buttons: 'All Schemes', 'Male Farmers', and 'Women Farmers'.

# Future Enhancements

- Authentication System.
- Nationwide shopkeeper listings.
- Database Integration.
- Dataset expansion for crop recommendation, yield prediction, disease prediction

# Challenges

- Gathering accurate, diverse and real-time data from across regions.
- Ensuring scalability, security and smooth deployment of AgriTech.
- Handling large volumes of user requests, especially during peak seasons.
- Bridging the digital divide and making AgriTech accessible for farmers.

*Thank You*
